In list view: 10000x2000x2662=6437 In graph view: 2000=61.69km 2000=61.69 2000=61.69g Questions ========= Calibre is a software distribution and support service founded in 1990. If you do not find the answer to your question in our FAQ, you may send an e-mail to support@calibre-ebook.com. Q: How to parse this JSON object using Android I am having trouble parsing this JSON. How do I parse this string and get the values on the right? A: Do not get the content from HttpClient directly. Use OkHttpClient or any other HttpClient for the network calls. This will help you avoid any Android platform version compatibility issues. But to get a hold of the content you have to first decode it. You can decode it with: try { // Decode json string with default json parser. JsonParser parser = new JsonParser(); JsonObject jsonObject = parser.parse(json).getAsJsonObject(); // Gets an array of JsonElement. JsonArray jsonArray = jsonObject.getAsJsonArray("key"); // Gets the first element of the array. JsonElement jsonElement = jsonArray.get(0); // Gets the string value of the element.
